# Race and Income in California: Census 2000 Profiles 

No. 13, June 2003

Report Author: Alejandra Lopez<br>Series Advisors: Matthew Snipp \& Al Camarillo<br>${ }^{\text {© }} 2003$ by CCSRE

The CCSRE Race and Ethnicity in California: Demographics Report Series documents the current socioeconomic, educational, and demographic status of ethnic and racial minority populations in California. Census 2000 data are being used as they become available to examine racial/ethnic diversity, residential segregation, household and family composition, language use, educational attainment, occupation and work status, income, and poverty. The series is made possible by a grant from the James Irvine Foundation, and is accessible on-line at the CCSRE website: www.stanford.edu/dept/csre.

As part of a legacy of racial inequality in the United States, income levels continue to vary across race. To detail such variations in California, this report summarizes Census 2000 income data for families and households, as well as per capita. Information was collected on the last U.S. decennial survey regarding money income in the year 1999, defined by the Census Bureau (DaNavas-Walt \& Cleveland, 2002) as follows:

Money income data are collected for all people in the sample 15 years and over. Money income includes earnings, unemployment compensation, workers' compensation, social security, supplemental security income, public assistance, veterans' payments, survivor benefits, pension or retirement income, interest, dividends, rents, royalties, estates, trusts, educational assistance, alimony, child support, assistance from outside the household, and other miscellaneous money income. It is income before deductions for taxes or other expenses and does not include lump-sum payments or capital gains.

Measures discussed in this report include income distributions for families and households, median incomes for families and households, and per capita income (definitions paraphrased from U.S. Department of Commerce, 2002):

Family income - includes income of all family members 15 years and older related to the householder.

Household income - includes income of all individuals 15 years and older in the household, regardless of whether they are related to the householder. Because many households consist of only one person, average household income is usually less than average family income (see Table 1 below).

Median income - divides the income distribution into two equal parts, one half of the cases falling below the median income and one half above the median; computed for families and households.

Per capita income - the mean income computed for every man, woman, and child in a particular group; derived by dividing the total income of a particular group by the total population in that group.

Table 1 lists median incomes at the family, household, and per capita levels for each group identified by race as well as the total population in California and the nation as a whole. In general, income levels are higher in California than in the U.S. overall; the exceptions to this are per capita incomes for Latinos and individuals identified as Some Other Race, both of which are lower in California compared to the nation at large.

Examining family income data in California across race, Whites and Asians have the highest median incomes (at $\$ 65,342$ and $\$ 61,383$, respectively), followed by Pacific Islanders $(\$ 50,641)$ and families with householders identified with Two or More Races $(\$ 42,566)$. Blacks, American Indians, Latinos, and Some Other Race families all have lower median incomes (ranging between $\$ 34,079$ and $\$ 39,726$ ). The same general pattern holds at the national level.

Table 1: Median and Per Capita Income (Dollars) by Race

| Race of Householder or Individual | California | United States |
| :--- | ---: | ---: |
| Family | 53,025 | 50,046 |
| White, not Latino | 65,342 | 54,698 |
| Asian | 61,383 | 59,324 |
| Pacific Islander | 50,641 | 45,915 |
| Two or More Races | 42,566 | 39,432 |
| Black | 39,726 | 33,255 |
| American Indian | 38,547 | 33,144 |
| Latino | 35,980 | 34,397 |
| Some Other Race | 34,079 | 32,398 |
| Household | 47,493 | 41,994 |
| Asian | 55,366 | 51,908 |
| White, not Latino | 53,734 | 45,367 |
| Pacific Islander | 48,650 | 42,717 |
| Two or More Races | 40,371 | 35,587 |
| American Indian | 36,547 | 30,599 |
| Latino | 36,532 | 33,676 |
| Some Other Race | 35,265 | 32,694 |
| Black | 34,956 | 29,423 |
| Per Capita | 22,711 | 21,587 |
| White, not Latino | 31,700 | 24,819 |
| Asian | 22,050 | 21,823 |
| Black | 17,447 | 14,437 |
| Pacific Islander | 15,610 | 15,054 |
| American Indian | 15,226 | 12,893 |
| Two or More Races | 14,573 | 13,405 |
| Latino | 11,674 | 12,111 |
| Some Other Race | 10,579 | 10,813 |

Source: Census 2000 SF3

In these analyses, race of the householder is used as a proxy for race of the family and race of the household since these are the only race-specific income data available from the Census Bureau. It should be kept in mind that there are families and households for whom the race of the householder is not representative of all its members.

## Family Income

Income levels also vary in different parts of the state. Using county level data, Map Set 1 visually displays differences in median family income for each race group, with darker shading indicating higher incomes. Note that a standardized shading scheme has been used to facilitate comparison across groups. For specific county data, see Appendix Table 3.

Another way to compare family income levels across race groups is to examine the distribution of incomes. In Figure 1, sixteen income categories are used, ranging from "Less than $\$ 10,000$ " at one

## Map Set 1: Family Median Income (in Dollars) by Race

Figure 1: Family Income Distribution by Race in California

Figure 2: Family Income Distribution by Region in California -- Total Population

Figure 3: Family Income Distribution in California and the U.S. -- Total Population

end of the spectrum to " $\$ 200,000$ or more" at the other. This illustration indicates that there is a greater range in the percentage of each race population in the lowest income bracket, compared with other income categories, especially those close to the state median, $\$ 53,025$.

To help contextualize the family income data for California, Figure 2 illustrates regional ${ }^{1}$ differences in the income distribution for the statewide population (see Appendix Table 1 for specific regional data used to create this graph); similarly, Figure 3 offers a national comparison.

## Household Income

Returning to Table 1, data are presented regarding median household income. A similar pattern as that for median family income is evident across race groups in California: Asians and Whites with the highest income levels ( $\$ 55,366$, and $\$ 53,734$, respectively), followed by Pacific Islanders $(\$ 48,650)$ and households headed by individuals identified with Two or More Races $(\$ 40,371)$; and, American Indians, Latinos, Some Other Race households, and Blacks have the lowest income levels (ranging from $\$ 34,956$ to $\$ 36,547$ ). Again, the same general pattern holds at the national level as well, the only difference being that American Indians have a lower median than Latinos and Some Other Race households, whereas the reverse is true in California.

Map Set 2 summarizes median household income across race group in California, similar to Map Set 1 with regard to median family income; again, darker shading indicating higher incomes. For specific county data, see Appendix Table 4. Figure 4 summarizes household income distributions for each race population in the state. As was the case with family income distributions, the largest range is evident at the lowest income bracket, "Less than $\$ 10,000$ ", especially compared with income categories near the median household income, $\$ 47,493$.

Also, to help contextualize the household income data for California, Figures 5 and 6 illustrate regional and national data, respectively. (Note: Appendix Table 2 lists specific regional data used to create Figure 5.)

## Per Capita Income

The bottom portion of Table 1 lists per capita income rates for the total population and each race group. Though the same general pattern held for family and household median incomes, the ordering at the per capita level is a bit different. Whites and Asians in California maintain the highest per capita income levels ( $\$ 31,700$ and $\$ 22,050$, respectively), following them are Blacks

[^0]
## Map Set 2: Household Median Income (in Dollars) by Race

Figure 4: Household Income Distribution by Race in California

Figure 5: Household Income Distribution by Region in California -- Total Population

Figure 6: Household Income Distribution in California and the U.S. -- Total Population

( $\$ 17,447$ ), Pacific Islanders $(\$ 15,610)$, American Indians $(\$ 15,226)$, and Two or More Races $(\$ 14,573)$ individuals; Latinos and Some Other Race individuals have the lowest per capita income levels ( $\$ 11,674$ and $\$ 10,579$, respectively). At the national level, Whites and Asians also have the highest per capita incomes, and Latinos and Some Other Race individuals the lowest, with the other groups ranking in a slightly different order (see table).

To illustrate per capita income levels in various parts of the state, Map Set 3 summarizes county data for each race population, again, with darker shading indicating higher incomes. For specific county data, see Appendix Table 5.

Another way to evaluate per capita income differences across race groups is to consider the percent change that has occurred over the past decade. Thus, Figure 7 illustrates growth rates in the per capita income for each race as well as for the total population, in California and the U.S. overall. While the national per capita income grew 49.7 percent between 1990 and 2000 (as measured in 1989 and 1999 on the census surveys), the state per capita income growth was less, at 38.4 percent. Changes in national median income levels for both families and households were also higher than those for California: for families, 39.7 percent in the U.S. versus 32.7 percent in California; and for households, 42.1 percent in the U.S. versus 30.7 percent in the state (these growth rates for family and household medians are not shown in any data summaries).

Figure 7: Change in Per Capita Income 1990 to 2000, by Race

Focusing on the California data, American Indians experienced less growth (28.9 percent) in per capita income over the past decade than other groups; this is also the only group with a lower change rate in per capita income than the state overall. Latinos and people identified as Some Other Race had growth rates similar to the state ( 37.3 and 39.3 percent, respectively); the other groups all experienced more growth in their per capita income than the state as a whole, with

## Map Set 3: Per Capita Income (in Dollars) by Race

Whites and Asian/Pacific Islanders ${ }^{2}$ at the top ( 66.6 and 59.2 percent, respectively), followed by Blacks (50.7 percent).

Examining changes in per capita income at the national level present, Blacks experienced the largest growth between 1990 and 2000, 60.3 percent, followed closely by Whites and Asians/Pacific Islanders (both with growth rates of 58.2 percent). Unlike California, American Indians in the U.S. overall experienced greater growth in their per capita income, 54.8 percent, compared to the nation overall ( 49.7 percent). Latinos ( 44.2 percent) and people identified as Some Other Race (47.3 percent) had the lowest growth in per capita income over the past decade.
